

DSU DevHack 2.0 – Vultr’s Track Participant Guide

Vultr Track Name

Vultr Cloud Deployment Track

Description

The Vultr Track at DevHacks 2.0 challenges participants to build and host their web infrastructure entirely on the Vultr Cloud Platform. This track is designed for teams who want to leverage Vultr’s high-performance compute, networking, and storage services while developing their projects.

Participation Requirements

- To compete in the Vultr Track, teams must host their hackathon project on Vultr.
- The team leader will be provided with a Vultr account preloaded with cloud credits to cover the hosting costs during the hackathon.
- Only one Vultr account will be created per team, and this account will be managed under Vultr’s sponsorship program

Account Creation Process

- 1.The team leader must submit their details via the official Vultr Track Registration Form, which will be closed on 11th September midnight.
- 2.The email address provided must not be associated with any existing Vultr account.
- 3.Vultr will create a new account for the team leader and allocate hosting credits for use during the hackathon period.
- 4.Once the account is created, credentials will be shared with the team leader for immediate deployment.

Hosting Benefits

- **No–Cost Hosting:** Credits cover the cost of hosting your project during the hackathon.
- **Global Infrastructure:** Deploy in any of Vultr’s 30+ worldwide locations.
- **Full Platform Access:** Utilize compute instances, object storage, managed databases, networking, and more.
- **Direct Technical Support:** Vultr team members will be available to assist with setup, troubleshooting, and optimization.

Important Notes

- The provided Vultr account is intended **solely for hackathon use**.
- Any unused credits will expire after the hackathon ends.
- Participants are responsible for maintaining compliance with Vultr's Terms of Service.

Winner Prizes

At the conclusion of the hackathon, **three winners** will be selected from the Vultr Track participants:

- 1st Place — \$1,500 in Vultr cloud credits.
- Runner Ups — \$1000 in Vultr cloud credits.
- 2nd Runner Ups — \$500 in Vultr cloud credits.

Prizes will be awarded as Vultr credits directly to the winning team leaders' accounts, redeemable for any Vultr services.

Resources to Refer:

1. Install Nginx Web Server on Ubuntu 24.04

A detailed guide to installing and configuring Nginx on Ubuntu for hosting static or dynamic content. It covers installation, virtual host setup, firewall configuration, and server management.
